

The world's first single-handed scalpel blade remover.

www.qlicksmart.com

The forgotten sharps injury

Scalpel injuries are up to 6 times more likely to occur than needlestick injuries. They are particularly common in surgical settings. Regrettably, healthcare organisations and personnel have underestimated the likelihood of these injuries.

Scalpel cuts can result in infections, blood-borne diseases and psychological distress. Serious injuries could require microsurgery to repair a digital artery, nerve and/or tendon.

Many such scalpel injuries can be prevented using the Qlicksmart **BladeFLASK**, the world's pioneering single-handed blade remover.

BladeFLASK allows all scalpel blade users to maintain their preferences for the standard metal handles.

BladeFLASK is simple to use with a quick "push, click, and pull" action to remove and contain used scalpel blades.

This easy-to-use solution provides a lower cost alternative to safety scalpels.

Used together with a hands-free passing technique, the BladeFLASK can prevent up to 5 times more injuries than a safety scalpel.

BladeFLASK has won multiple awards, which demonstrate its practicality and effectiveness in reducing scalpel injuries.

The Qlicksmart BladeFLASKs have safely removed over 70 million contaminated scalpel blades, and prevented up to 150,000 injuries around the world.

Specifications
