BladeNeedle**SYSTEM**

Blade Remover | Needle Counter

Work Safe Today,

Play Safe Tomorrow

QLICKSMART®

... and be safe

The forgotten sharps injury

Scalpel injuries are up to 6 times more likely to occur than needlestick injuries. They are particularly common in surgical settings. Regrettably, healthcare organisations and personnel have underestimated the likelihood of these injuries.

Scalpel cuts can result in infections, blood-borne diseases and psychological distress. Serious injuries could require microsurgery to repair a digital artery, nerve and/or tendon.

Many such scalpel injuries can easily be prevented using Qlicksmart's **BladeNeedleSYSTEM** (BNS), the world's pioneering single-handed blade remover.

The world's pioneering single-handed blade remover

BNS is two safety devices in one - the world's only single-handed blade remover is combined with the standard needle counter to allow an accurate count and efficient disposal of both scalpel blades and suture needles.

BNS is simple to use with a quick "push, click, and pull" action to remove and contain used scalpel blades.

This easy-to-use solution provides a low cost alternative to safety scalpels, allowing surgeons to maintain their preferences for the standard metal handle.

Used together with a hands-free passing technique, the Qlicksmart BNS can prevent up to 5 times more injuries than a safety scalpel.
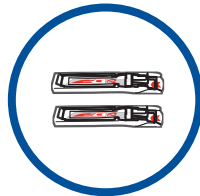

Extra blade remover cartridges are available for major surgical procedures.

It has already been embraced by healthcare workers around the world for its unique dual function, cost-saving and ease of inclusion into custom procedure packs.

The BNS contains the features of a numbered foam block for needles, a magnetic surface to hold odd-shaped sharps, and Qlicksmart's single-handed blade remover to remove used scalpel blades
